EASTEK INTERNATIONAL CORPORATION

EASTEK INTERNATIONAL CORPORATION, ILLINOIS

With operations in the United States, Mexico, and Asia, Eastek International Corporation helps OEMs navigate an increasingly global manufacturing environment through integrated engineering, supply chain management, and production services. For more than three decades, the company has supported customers developing products for medical, industrial, transportation, consumer, and commercial markets by providing flexible manufacturing solutions tailored to regional business strategies.

As companies continue to diversify supply chains and evaluate regional manufacturing options, Eastek has strengthened its competitive advantage through a balanced global footprint that offers customers greater resilience and flexibility. Its engineering teams work closely with customers from product development through full-scale production, emphasizing design optimization, quality, and supply chain continuity. This integrated approach enables customers to reduce risk while maintaining the responsiveness needed in today's fast-changing marketplace.

Beyond electronics manufacturing, Eastek provides comprehensive product realization services that include battery management solutions, injection molded plastics, mechanical integration, box build, sourcing, quality management, logistics, and program management. By combining global manufacturing resources with localized customer support, the company helps OEMs simplify complex manufacturing programs while maintaining visibility throughout the product lifecycle.

"Global manufacturing is no longer just about cost. It's about creating resilient, flexible supply chains that support long-term customer success," said Steve Busch, Vice President of Business Development. "Our focus is helping customers identify the right manufacturing strategy for their products while delivering the engineering expertise and operational support they need to compete globally."
